Chetan Bhosale

PRODUCT ENGINEER

Product engineer who sits between customers, design, and production code. I started in sales, learned to build the tools customers kept asking for, and never lost that loop — requirement calls, scope in Figma, ship, then own what happens after launch. Founding engineer at Linkrunner, working from React and React Native interfaces down to Go services, ClickHouse, Kafka, and Kubernetes.

EXPERIENCE

2025 – NOW
BENGALURU

Linkrunner
FOUNDING ENGINEER
Mobile measurement & attribution · ₹5 Cr pre-seed, Titan Capital · 100+ growth teams

- Own the full product loop with customers and design: join requirement calls, spot repeated friction, shape scope in Figma, and carry the decision through engineering into release.
- Rebuilt the core customer dashboard from **0 → 1** and migrated every account onto it in **20 days**, using existing product, APIs, and customer context to preserve behavior while improving the experience.
- Own a five-platform SDK fleet — Android, iOS, React Native, Flutter, and Cordova — including the integration and release developer experience.
- Built an SDK console that cut attribution integration testing from roughly **1 hour to about 5 minutes**, giving growth teams far faster feedback while implementing.
- Migrated analytics from PostgreSQL to **ClickHouse**, taking key queries from **seconds to milliseconds** and reducing infrastructure cost by as much as **$8,000 per month**.
- Helped break the Node.js monolith into **Go** services using gRPC, WAL-backed writes, and fallbacks, now serving more than **25M requests per month**.
- Moved event streaming from SQS to **Kafka** and contributed to the wider infrastructure migration from **AWS to GCP**.

2024 – 2025
AHMEDABAD

Petpooja
SOFTWARE ENGINEER
Joined TransErg LLP as a Software Engineer; continued at Petpooja after the acquisition · ₹137 Cr Series C, Dharana Capital · 150K+ businesses, 7M+ orders/day

- Worked directly with restaurant and hotel chains to turn their ordering requirements into the **Online Ordering Widget**, which handled roughly **10K real food orders every day**.
- Built a domain-registry system that let restaurant brands connect their own domains and run the ordering storefront as their own customer-facing website.
- Moved services off manually managed single EC2 instances into Docker and then onto production **Kubernetes (EKS)**, improving repeatability and operational ownership.
- Served as **DRI for Petpooja Studio**, owning a library of **3M+ food images** delivered to Zomato and Swiggy while coordinating specifications and SLAs with their teams.
- Deployed a **self-hosted LLM pipeline** to tag, clean, and quality-check food images at scale, cutting the manual work needed to operate the Studio library.

2022 – 2023
REMOTE

Hire My Assistants
SALES → FULL-STACK ENGINEER
Real-estate services · the transition from selling the product to building it

- Managed sales and campaigns for **10 realtor clients**, then used the pain heard on those calls to decide what to build first.
- Shaped and shipped an internal CRM used by more than **1,000 realtors**, prioritizing the parts of the funnel customers struggled with most.
- Built high-traffic property listing pages serving roughly **100K visitors per day**.

SELECTED PROJECTS

PRIVATE BETA
CLOUD INFRA

Nakama · trynakama.com — Production-like sandboxes for AI agents, security testing, and API testing — with real, masked data and zero risk to production.

LIVE
AI VISIBILITY

geo.repair · geo.repair — A 26-point AI crawler audit that clones a repository, applies the fixes, validates the build, and opens the pull request.

LIVE
DEVELOPER SOCIAL

OmegleForTech · omeglefortech.com — Fast, GitHub-verified 1:1 video matching for developers, built on WebRTC and real-time presence.

BUILDING
PROMPT-TO-PRODUCT

Dovia · dovia-delta.vercel.app — A multi-model app builder with iterative editing, live preview, and a path from a single sentence to a deployed product.

TOOLKIT

LANGUAGES	TypeScript, Go, JavaScript, SQL
INTERFACE	React, Next.js, React Native, Flutter, Figma
SYSTEMS	Node.js, gRPC, Kafka, WebSockets, REST, PostgreSQL, ClickHouse, Redis
CLOUD	Kubernetes, Docker, AWS, GCP
PRODUCT	Customer discovery, requirement shaping, design partnership, launch and feedback

EDUCATION

2021 – 2024
AHMEDABAD

St. Xavier's College
7.9 CGPA

Bachelor of Computer Applications (BCA) · Member of the 100xDevs community
